Emerging Topics: Music Synthesis for Wind Music

Dr.-Ing. Stefan Balke

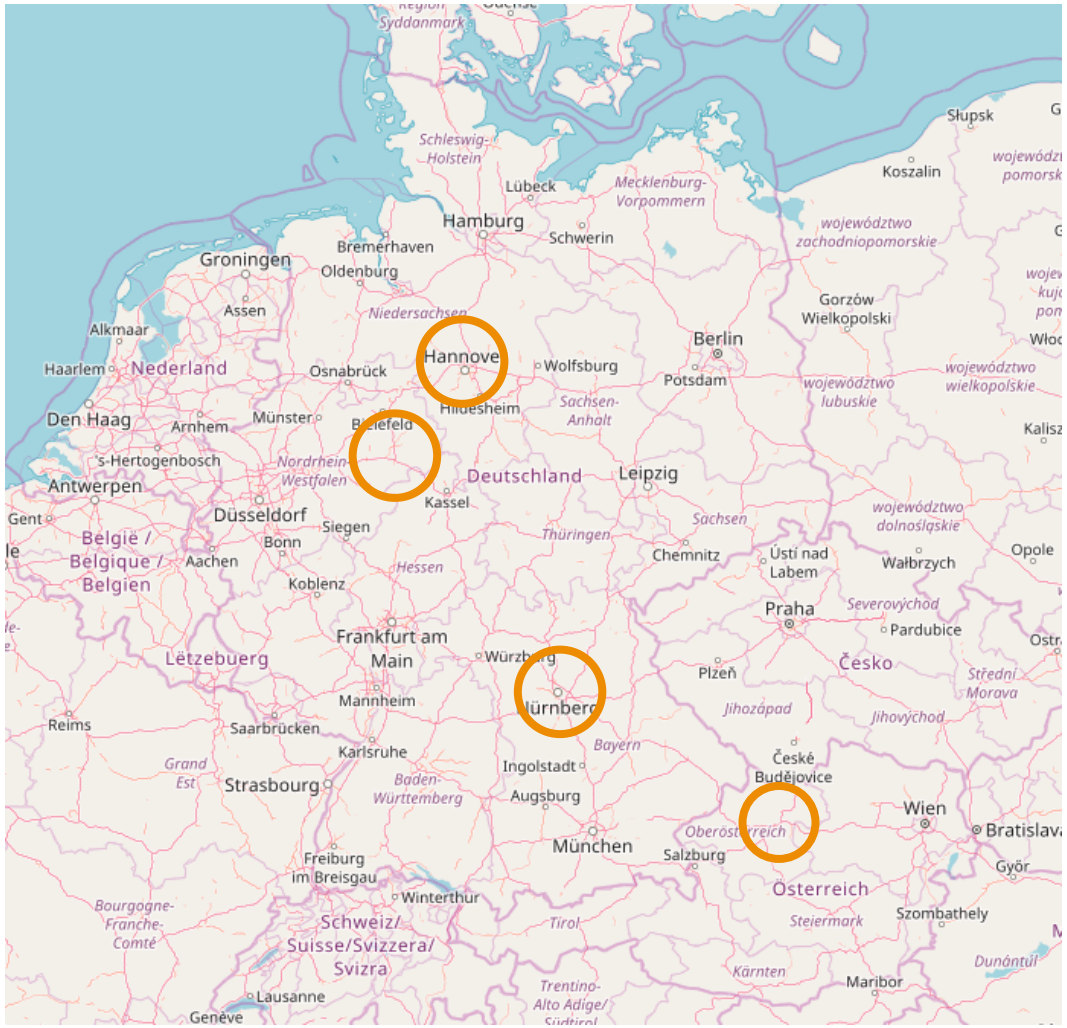
Bamberg, 02.02.2026

Friedrich-Alexander-Universität Erlangen-Nürnberg

Funded by
Deutsche Forschungsgemeinschaft
German Research Foundation

Fraunhofer IIS

Professional Background



- Electrical Engineering (Dipl.-Ing.) @ Uni Hannover
- PhD in **Erlangen** @ AudioLabs
- PostDoc in **Linz** @ JKU
- Teamlead Data Science in **Paderborn** @ pmOne
- Professor at Hochschule Weserbergland, Hameln
- **Current:** PostDoc in Erlangen @ AudioLabs (Habilitation)

- **Teaching:**
  - TH OWL: Datenbanken (2020-23), Data Science Seminar (2025)
  - Hochschule Weserbergland
  - Hochschule Trier: Machine Learning (2020-23)
  - Controller Institut Wien: Data Science

Funded by DFG Deutsche Forschungsgemeinschaft German Research Foundation

Community Work

- **1996:** Weserberglandorchester Bödexen (WBO)
- **Since 2008:** Sinfonischen Blasorchester Höxter (SBO)
- **Since 2019:** Organizing Committee SBO
- **2020-23:** Board member Stadtmusikverband Höxter
- **Since 2021:** Co-Conductor WBO (with Nicole Krois)
- **Since 2025:** Board member SBO HX e.V.
- **Since 2026:** Board member ISMIR (member-at-large)

Funded by DFG Deutsche Forschungsgemeinschaft German Research Foundation

Music Processing for Wind Music
Outline

Part 1: Datasets

- Introduction & Overview
- ChoraleBricks dataset
- ChoraleWind dataset

Part 2: Synthesis

- Introduction & Overview
- Pulsetable Synthesis
- Differentiable Pulsetable Synthesis

Thanks to my colleagues:

Meinard Müller

Simon Schwär

Christian Dittmar

Manuel Peters

And all the great contributions from the ISMIR and signal processing community.

AUDIO LABS

Datasets
Overview in the MIR Community

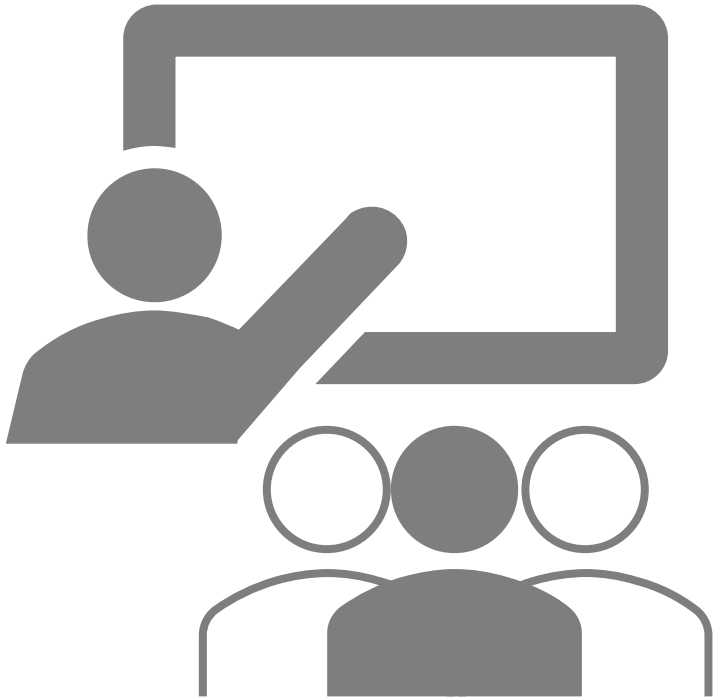
- Hundreds of datasets available in den MIR community
- Overview of existing datasets: https://github.com/ismir/mir-datasets
  (>200 entries…constantly growing)
- Datasets usually contain audio data (mono, stereo, multitrack) + annotations

- **Annotations:**
  Beats, structure, melody, fundamental frequency, harmony, metadata (artist, title, genre), …
- Not all audio data can be shared publicly → copyright restrictions

Funded by DFG Deutsche Forschungsgemeinschaft German Research Foundation

Datasets

Your opinion



Why are public datasets important (not only) in music research?

Funded by DFG Deutsche Forschungsgemeinschaft German Research Foundation

AUDIO LABS

Datasets

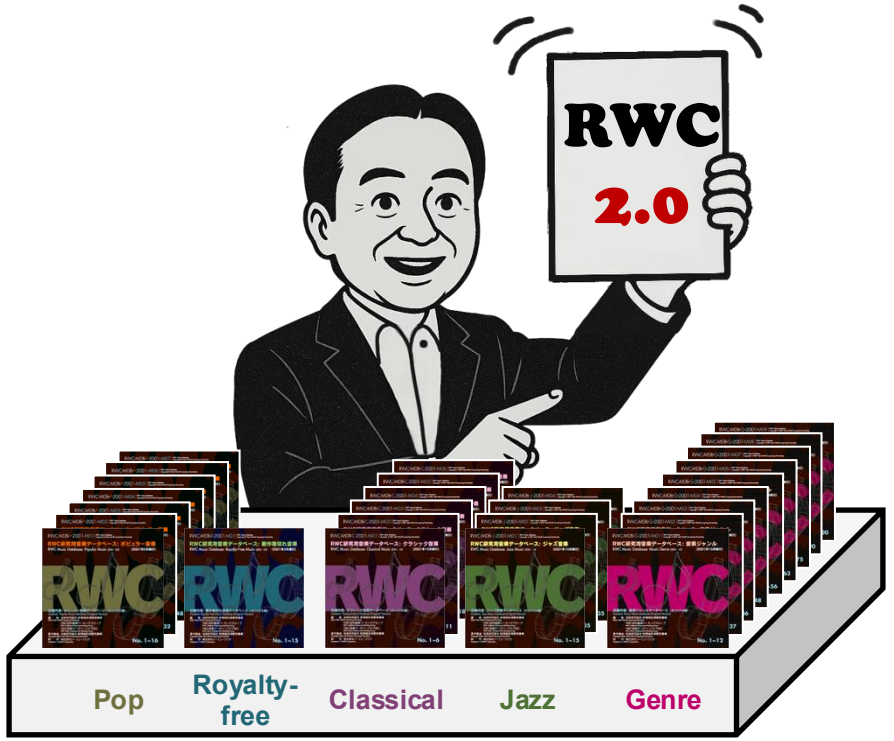
Why are datasets important in music research?

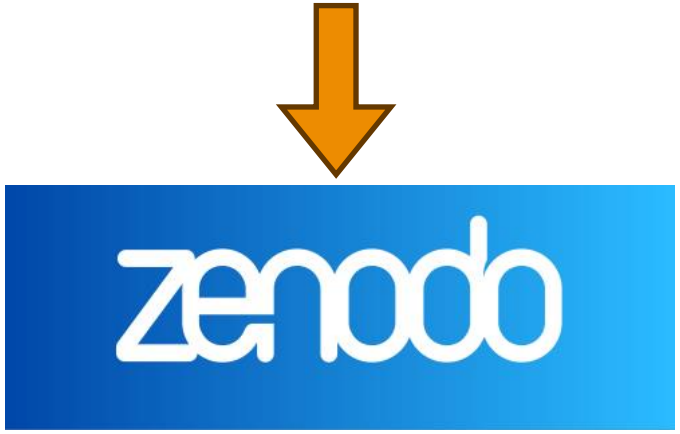
- Basis for experiments: validate or falsify research questions/theories
- Serve as training data: No data → no machine learning models
- Facilitate exchange between researchers
- Evaluation on public datasets can help to make works comparable
- Preservation of cultural heritage

Funded by DFG Deutsche Forschungsgemeinschaft German Research Foundation
AUDIO LABS

Datasets
Spotlight: RWC

- Released in 2002 by Masataka Goto
- First dataset with cleared licenses
- Most of the 315 pieces new compositions mimicing different styles
- **Annotations:** Beats, structure, lyrics, melody, sheet music (MIDI)





Stefan Balke, Johannes Zeitler, Vlora Arifi-Müller, Brian McFee, Tomoyasu Nakano, Masataka Goto, and Meinard Müller:
RWC Revisited: Toward a Community-Driven Music Information Retrieval Corpus
Accepted for TISMIR, 2026.

Funded by DFG Deutsche Forschungsgemeinschaft German Research Foundation
AUDIO LABS

Datasets

Spotlight: Schubert Winterreise

- Recordings of Franz Schubert‘s song cycle „Die Winterreise“ (1827)
- 24 songs, 9 performances
- 2 are open access
- **Annotations:** Sheet music, chords, structure, lyrics

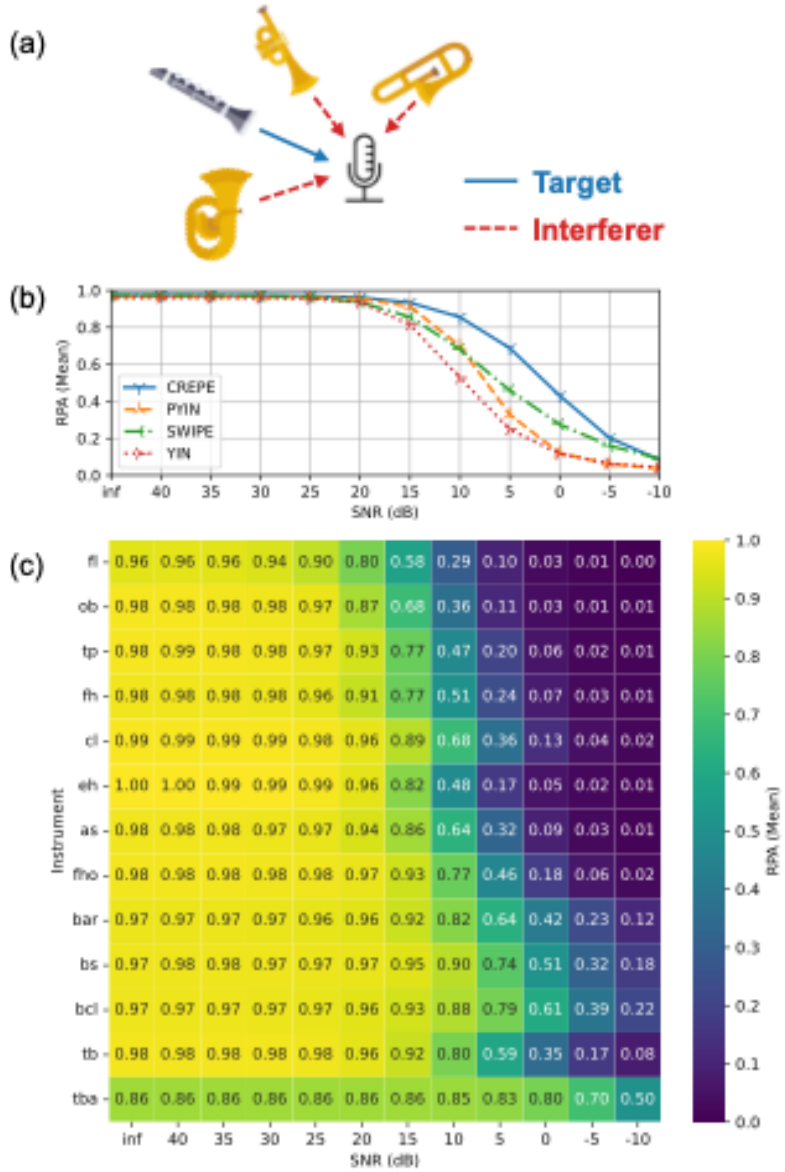
Robustness of Pitch Estimators

Or: When do pitch estimators break?

- Cross-talk always present in real-world ensemble recordings

- **Research question:** How robust are current pitch estimators to different cross-talk settings?



Peter Meier, Meinard Müller, and Stefan Balke: **Analyzing Pitch Estimation Accuracy in Cross-Talk Scenarios: A Study with Wind Instruments**, In Proceedings of the Sound and Music Computing Conference (SMC), Accepted, 2025.

Funded by DFG Deutsche Forschungsgemeinschaft German Research Foundation

AUDIO LABS

Dissonance Analysis

Or: Why does it sound unpleasant?

- Automatically measure Sensory (perceived) Dissonance
- **Reaserch question:** What are the impacts of timbre, tuning, and intonation?

Simon Schwär, Stefan Balke, and Meinard Müller:
Measuring Sensory Dissonance In Multi-Track Music Recordings: A Case Study with Wind Quartets, ISMIR, 2025.

Music Synthesis
Popular Approaches

Image Sources:
https://commons.wikimedia.org/wiki/File:Hammond_B3_Organ_at_Recording_Studios.jpg
https://commons.wikimedia.org/wiki/File:Minimoog,_Deutsches_Museum.jpg

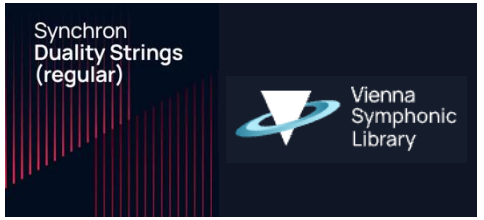
Audio Sources:
Procol Harum – A Whiter Shade of Pale
Herbie Hancock – Chameleon
Fabio Amurri – A New Prince

Additive Synthesis

- Represent sound as a sum of sinusoids (Fourier principle)
- Each sinusoid represents a partial
- Amplitude of each partial forms timbre

Subtractive Synthesis

- Sound starts with a spectrally rich source (e.g., sawtooth, square, noise)
- Filter partials to create sounds



Sample-based Synthesis

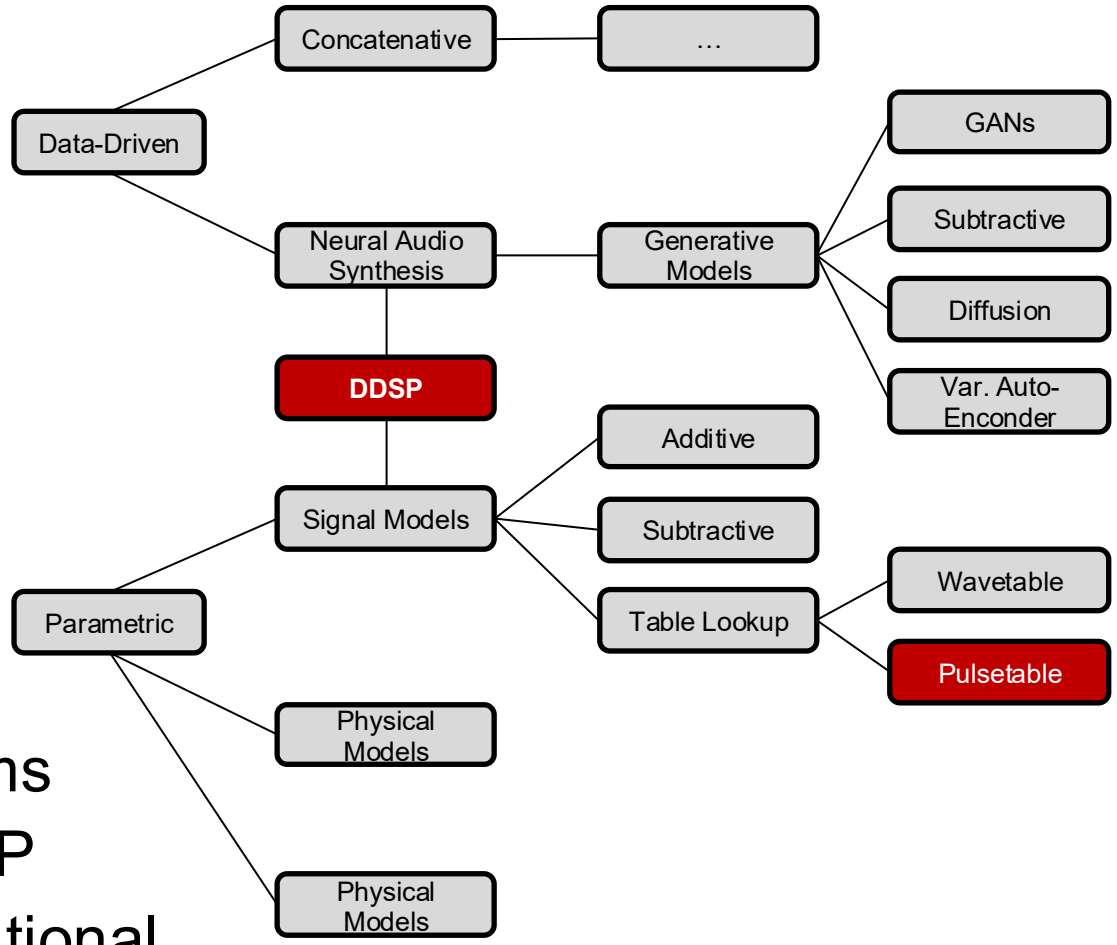
- Sound is generated with recorded samples
- Longer notes with looping
- Pitch changes by transposition or resampling

Funded by DFG Deutsche Forschungsgemeinschaft German Research Foundation
AUDIO LABS

Music Synthesis
Recent Approaches

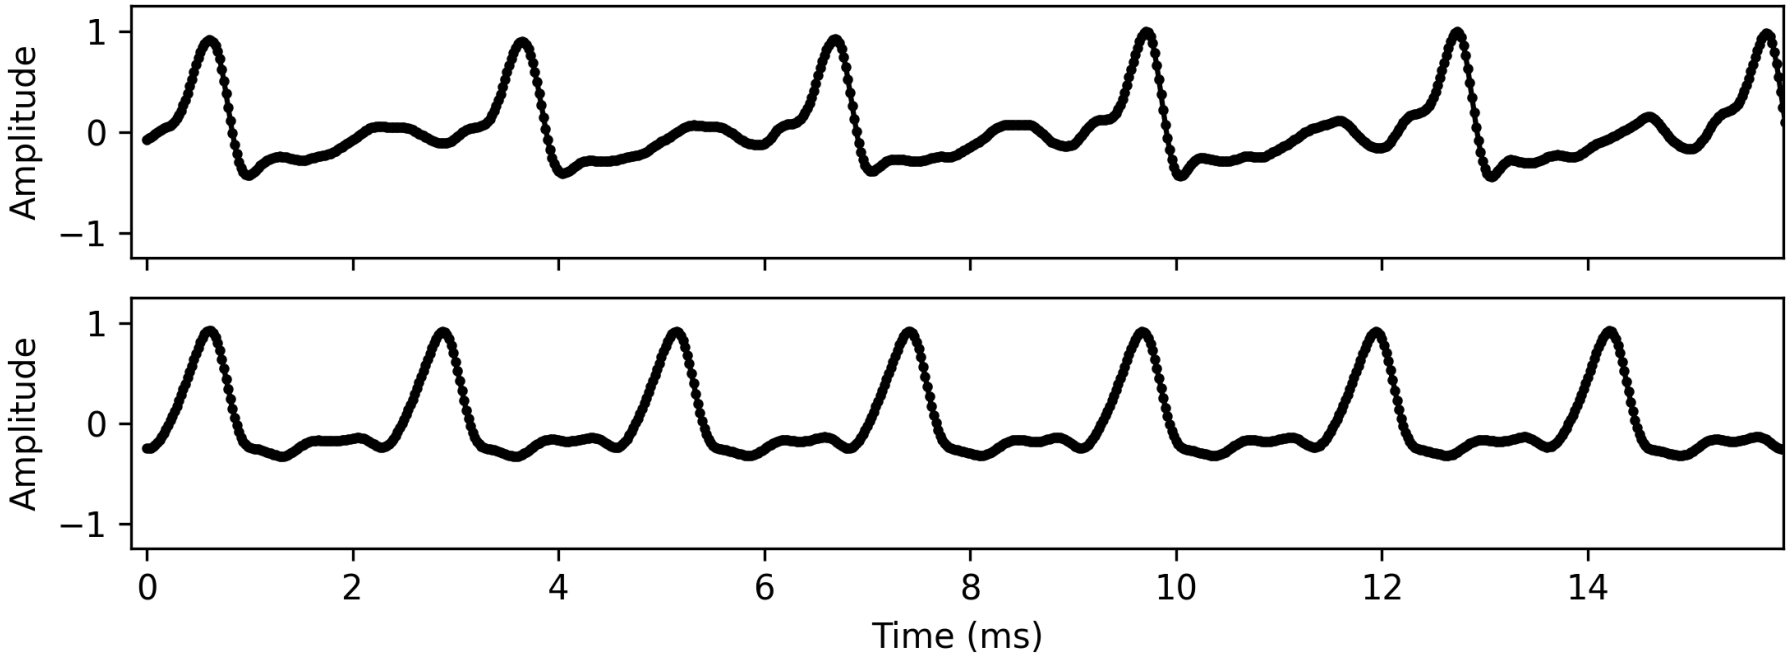
- **Neural Synthesis:**
  Use a neural network to generate audio
  → high flexibility, hard to control, high computational requirements

- **Differentiable Digital Signal Processing:**
  Use neural networks to control DSP systems
  → constrained to the capabilities of the DSP system, interpretable, much lower computational requirements



Funded by DFG Deutsche Forschungsgemeinschaft German Research Foundation

Music Synthesis
Pulsetable Synthesis



→ „Zoomed-In“ waveforms of an audio recording of a trumpet
→ Two different positions in the recording → pulses very similar

M. Oehler and C. Reuter, “Dynamic excitation impulse modification for a synthesis and analysis system for wind instrument sounds,” in MCM, 2009.

Music Synthesis
Pulsetable Synthesis

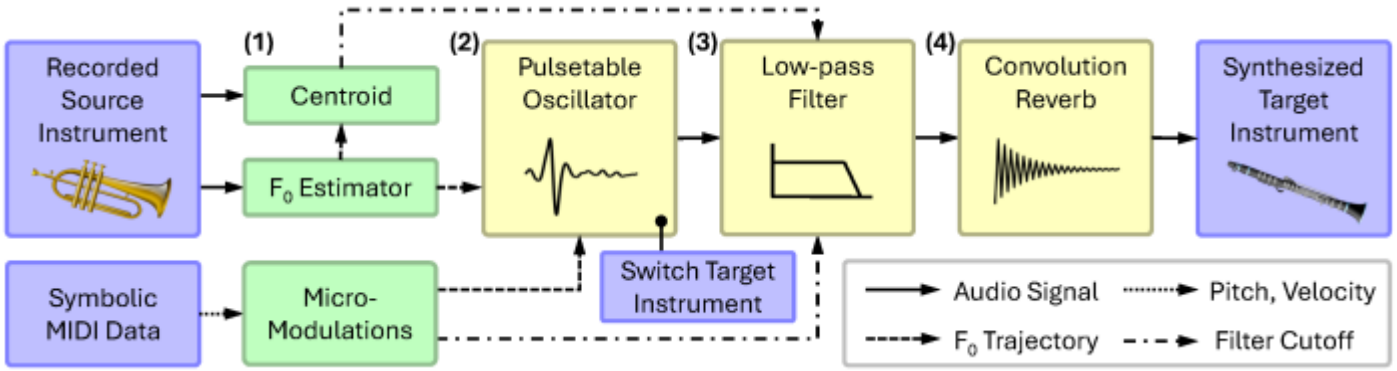
- Pulse extraction is tedious
- Post-processing involves manual „tweaking“
- Yielding sophisticated results is an art 🎨



Research Question:

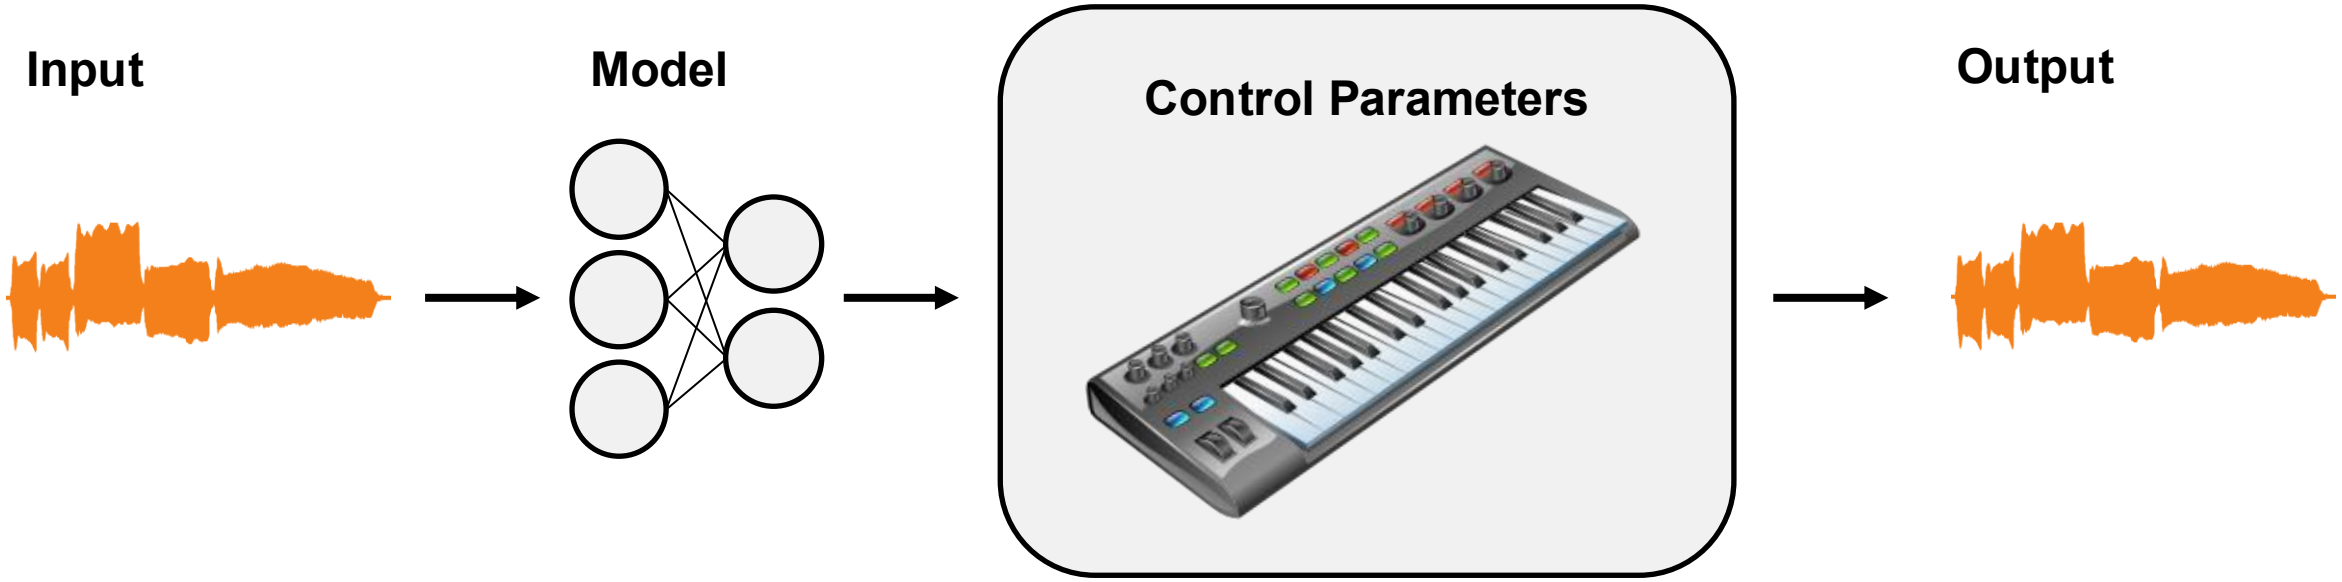
Can we efficiently learn the parameters in a data-driven way?

Most important: Pitch, loudness, and timbre (pulses)

→ DDSP is one way!

Funded by DFG Deutsche Forschungsgemeinschaft German Research Foundation

Music Synthesis
Differentiable Digital Signal Processing (DDSP)



Central Idea: Train a model that can „operate“ a DSP device (e.g., Synthesizer, Filter)

→ Solution space is constrained, models can be much smaller!

Funded by DFG Deutsche Forschungsgemeinschaft German Research Foundation

Summary
Emerging Topics: Music Synthesis for Wind Music

- Brief overview on datasets in Music Information Retrieval
- Deep Dive on datasets for wind music (ChoraleBricks, ChoraleWind)
- **Take home message:**
  Developing an intuition for your data is very important → leads to new ideas!

- Brief overview on popular synthesis approaches
- Deep dive on Pulsetable Synthesis
- Fundamental concept of Differentiable DSP
- **Take home message:**
  Potential for efficient, interpretable models → combination of AI & DSP

Funded by DFG Deutsche Forschungsgemeinschaft German Research Foundation
